

Andrés Viera

AI ENGINEER

linkedin.com/in/andres-viera | github.com/andy-viera | Montevideo, UY | contact@aviera.me | (+598) 91 987 506

AI engineer with 3+ years building full-stack applications and shipping production voice and chat AI agents. I specialize in speech-to-speech AI at the cutting edge: sub-second latency, hyper-realistic voices, real-time audio processing. Strong product-driven mindset focused on understanding what provides real value to the user.

Work experience

Foliume | AI Engineer

Montevideo, UY | Jun 2025 – Present

- Built the entire AI agent infrastructure from an empty repository: chat workers on WhatsApp processing multi-modal inputs (PDFs, images, Excel, audio, text) that became a core driver of 30,000+ monthly insurance quotes
- Own the voice AI initiative end-to-end. Built multiple voice workers on a speech-to-speech architecture with sub-second latency, VAD, AEC, BVC, hyper-realistic voices, and regional accent support
- Voice workers in production include customer support, triage, and cross-selling. Currently building a full sales agent that collects user data live, retrieves real-time quotes from multiple carriers, presents offers, handles objections, and closes the sale on the call
- Already multiple signed brokerage contracts, actively expanding to the UK. Full ownership of the most revenue-critical lane in the company

Pento AI | Full Stack Engineer

Montevideo, UY | Jun 2023 – Sep 2024

- Founding member of the application engineering team. Built AI products for US clients in healthcare and biotech
- Shipped a medical transcription platform reducing physician documentation time, and a biotech platform for airborne pathogen analysis. Stack: Next.js, tRPC, React Native, AWS

Education

Universidad ORT Uruguay | B.S. in Computer Science

Montevideo, UY | 2023 – 2026

92% average (GPA 4.0 equivalent).

Skills

Speech-to-speech AI | VAD | AEC | BVC | Real-time audio pipelines | Claude (Bedrock, Claude Code, MCP) | Gemini (Flash, Live API) | Python | TypeScript | Node.js | FastAPI | tRPC | WebSockets | SIP/RTP | AWS (Lambda, Step Functions, DynamoDB, S3, Bedrock, SQS) | GCP (Vertex AI) | Docker | React | Next.js | React Native (Expo) | LangChain | LangGraph | Langfuse

Projects

- **NERV**: Consumer mobile app for social skill development through AI-powered voice practice. Live on the App Store. Handling product, engineering, and distribution solo.
- **ContractorsUY**: Platform connecting contractors with clients in Uruguay
- **UruguayRP**: FiveM server generating \$1,000 USD/month at 15 years old with 100+ daily active users

Languages

English (Cambridge C2) | Spanish (Native)
